

# NAVIGATE YOUR REFUELING OPTIONS

*Whether you have 10 fleet vehicles or 100, propane autogas has a refueling infrastructure option to fit your needs. Whichever setup you choose, you're sure to save money on total cost-of-ownership and keep your fleet efficient. Call your infrastructure provider for more information about any of these options, and your local propane retailer for information regarding fuel.*

## FLEET OF 50 VEHICLES OR MORE

**Best Option:** Advanced private station.

**Includes:** A high-capacity tank, a canopy, and multiple fuel dispensers.

With this setup, either you or your propane provider own the infrastructure. If your propane provider owns the infrastructure, you're responsible for site preparation [crash protection and electrical]. If you own the infrastructure, you pay for the cost of a canopy, propane tank, pump, motor, and dispenser with card lock and vehicle tracking capability.

- Propane provider owns the infrastructure — Your cost: \$5,000-\$75,000 [site preparation]
- Fleet owns the infrastructure — Your cost: \$5,000-\$75,000 [site preparation] + \$60,000-\$225,000 [infrastructure]

## FLEET OF 50 VEHICLES OR FEWER

**Best Option:** Standard private station.

**Includes:** A 1,000-3,000-gallon tank, plus a single autogas fuel dispenser.

Like an advanced private station, you or your propane provider own the infrastructure. If your propane provider owns the infrastructure, you're responsible for site preparation [crash protection and electrical]. If you own the infrastructure, you purchase the propane tank, pump, motor, and dispenser for a convenient central refueling location.

- Propane provider owns the infrastructure — Your cost: \$1,500-\$15,000 [site preparation]
- Fleet owns the infrastructure — Your cost: \$1,500-\$15,000 [site preparation] + \$20,000-\$60,000 [infrastructure]

## FLEET HAS LIMITED SPACE FOR ON-SITE INFRASTRUCTURE

**Best Option:** Mobile refueling.

**Includes:** A dispenser and fuel tank mounted on a trailer, or a mobile setup customized by your propane retailer.

Your fleet can take advantage of propane autogas even if your plans are uncertain about investing in infrastructure in the near future. Mobile refueling is arranged with your local propane retailer. At a scheduled time, your retailer will refuel your fleet vehicles on-site, one by one. Costs and situations vary; talk to an area propane retailer for more details.

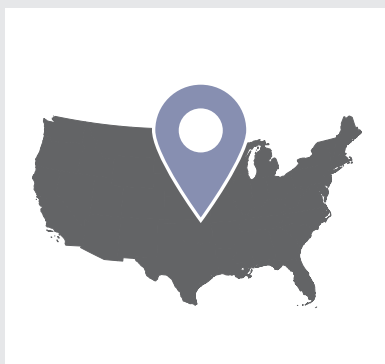

## FLEET IS IN THE PROCESS OF BUILDING PERMANENT REFUELING INFRASTRUCTURE

**Best Option:** Temporary refueling setup.

**Includes:** Exact setup varies, but generally includes a dispenser and fuel tank mounted on a trailer.

This option keeps fleets fueled with a temporary, self-contained refueling setup. A propane retailer owns all the equipment, and your fleet refuels using the tank and dispenser for as long as necessary. Costs and situations vary; talk to an area propane retailer for more details.

### Public Fueling Stations

Accessible 24/7 through a card lock system, public fueling networks are the ultimate convenience when you need to refuel along your route. See a complete list of locations at: [afdc.energy.gov/locator/stations](http://afdc.energy.gov/locator/stations).

### Ask About Quick-Connect Nozzles

When talking to your propane retailer about refueling infrastructure, don't forget to ask for new, quick-connect nozzles. With this new technology, your drivers simply click the nozzle into place, refuel, and get going.
